Women invited at the first prenatal visit n = 629
Declined to participate n = 36
Recruited (<14 weeks of gestation) n = 593
Excluded after recruitment, n = 11
Preexisting diabetes, 3
Chronic hypertension, 3
Corticosteroid use, 1
Fasting glucose ≥126 mg/dL at first test, 4
Eligible women (n = 582)
Did not complete follow-up, n = 59
Discontinued prenatal care at study sites, 44
Requested that data not be used, 7
Voluntary withdrawal, 4
Spontaneous abortion, 2
Missed abortion, 1
Fetal death, 1
Analysed cohort n = 523 CSP2 321; HGOIA 202 Recorded GDM 75; no GDM 448
No delivery data n = 6 (none with GDM)
Maternal outcomes n = 517 GDM 75; no GDM 442
Twin pregnancies excluded n = 7 (GDM 1; no GDM 6)
Neonatal outcomes (singleton pregnancies) n = 510 GDM 74; no GDM 436
