Analysed cohort, n = 523
Recorded GDM (D1): 75
First glucose criterion met (hierarchical order):
Early fasting glucose 92–125 mg/dL n = 23 (GDM 22; no GDM 1)
Positive OGTT (early criterion absent) n = 29 (GDM 28; no GDM 1)
OGTT in overt-diabetes range n = 1 (GDM 1)
Late fasting glucose 92–125 mg/dL only n = 25 (GDM 24; no GDM 1)
No criterion met n = 445 (no GDM 445)
D2: early fasting glucose or OGTT (late fasting glucose and overt range excluded) 52/521 evaluable = 10.0% (95% CI 7.7–12.9)
D1: recorded GDM 75/523 = 14.3% (95% CI 11.6–17.6)
OGTT values available: 71/523 (13.6%)
Above GDM thresholds: 40/71 = 56.3% (95% CI 44.8–67.3)
Selected women — not a cohort frequency
